Profile Summary

Full Stack Developer with hands-on experience in enterprise software development and full-stack application development using **React, TypeScript, NestJS, Python, MySQL, and REST APIs**. Experienced in developing modular backend services, scalable application workflows, event-driven systems, asynchronous processing, database-driven applications, and responsive user interfaces. Strong understanding of **software architecture, API development, debugging, system-level workflows, authentication, containerized development, and Git-based development practices**. Experienced in working with **Apache Kafka** for event-driven communication and designing loosely coupled application components with focus on scalability, reliability, maintainability, and clean code.

Experience

Software Engineer Thinkify Labs

Sep 23, 2026 - Present
Bengaluru, India

- Working on **AI-powered applications and intelligent agent-based tools** focused on building modern and practical AI solutions.
- Developing and integrating **AI agents and automation workflows** for intelligent task execution, information processing, and application automation.
- Building full-stack applications using **Python, React, SQL, and REST APIs** with a focus on modular and maintainable architecture.
- Designing backend services and data workflows using **Python** and integrating them with React-based user interfaces.
- Working on **agentic workflows** that enable AI systems to interact with tools, process information, and execute multi-step tasks.
- Developing, integrating, debugging, and improving AI-driven features across the application stack using Git-based development practices.

Software Development Engineer Intern Tally Solutions Pvt Ltd

Jun 2026 - Aug 2026
Bengaluru, India

- Contributing to enterprise software development, debugging, and enhancement of business applications in a large-scale product environment.
- Working on the **Tally Scheduler** framework to extend scheduled task execution capabilities and improve automation workflows.
- Analyzing existing application architecture, debugging software issues, and implementing enhancements across application components.
- Working with **C++ codebases**, debugging tools, and development workflows to understand and improve existing product functionality.
- Collaborating with development team members to analyze requirements, troubleshoot issues, implement solutions, and maintain reliable software components.
- Gaining hands-on experience in enterprise application development, system-level workflows, software debugging, and production-oriented engineering practices.

Full Stack Developer – Student Intern Inventech Info Solutions Pvt Ltd

Nov 2025 - Apr 2026
Bengaluru, India

- Developed full-stack web applications using **React, TypeScript, NestJS, REST APIs, and MySQL**.
- Designed modular backend services and implemented RESTful APIs for application workflows and frontend integration.
- Worked on database design, API integration, authentication, validation, debugging, and application performance improvements.
- Developed reusable React components and responsive user interfaces while maintaining structured frontend-backend communication.

- Applied Git-based development workflows, API testing, debugging, and clean coding practices throughout application development.

Projects

- **Tally Scheduler – Functional Task Execution & Integration**

- Analyzed and traced the end-to-end **Scheduler–Tally functional task flow**, including task scheduling, Tally instance detection, and task execution.
- Implemented and debugged Scheduler-to-Tally communication using **HTTP GET and POST requests** for task processing and backup notification.
- Implemented the functional task notification flow, sending task details such as **Task Type, Task ID, Record ID, and Company Path** from Scheduler to Tally through a JSON POST request.
- Traced Tally-side request handling through **HTTP header matching, JSON parsing, task-type identification, and function request processing**.
- Implemented task record retrieval using the **Record ID and Company Path** and extracted task frequency, status, last run time, next backup, remarks, and retry count.
- Added debugging and logging to trace Scheduler requests and record the updated task details for validation and troubleshooting.
- Tech Stack: C++, Tally Scheduler, HTTP, JSON, REST APIs, Visual Studio

- **TrustHire – Verified Freelancer Marketplace with Escrow System**

- Designed and developed a scalable full-stack marketplace with modular backend components for users, projects, payments, verification, and communication workflows.
- Implemented **event-driven workflows using Apache Kafka** for asynchronous communication between application components.
- Developed structured **REST APIs** using NestJS for business operations and integrated them with a React-based frontend.
- Designed milestone-based escrow workflows with backend validation and reliable state management.
- Implemented authentication and authorization using **Keycloak** with role-based access control.
- Used **Docker** for containerized application development and designed components with scalability and maintainability in mind.
- Tech Stack: React, TypeScript, NestJS, MySQL, Kafka, Keycloak, Docker

- **AI-Powered Road Accident Detection System**

- Developed an end-to-end application using independent frontend, backend, and AI processing services.
- Designed REST APIs using NestJS for video upload, processing requests, status tracking, result retrieval, and processed video download.
- Implemented asynchronous video processing using a dedicated Python FastAPI service for AI inference.
- Integrated OpenCV, PyTorch, and Ultralytics YOLO for object detection and video analysis.
- Built a responsive React dashboard for video upload, processing status monitoring, detection visualization, and result retrieval.
- Structured application components as independent services to improve separation of concerns, maintainability, and scalability.
- Tech Stack: React, TypeScript, Tailwind CSS, NestJS, Python, FastAPI, OpenCV, PyTorch, Ultralytics YOLO

- **TaskFlow Pro – Role-Based Employee Management System**

- Developed a full-stack employee management platform for task, attendance, and workflow management.
- Designed modular backend services using **NestJS** and implemented RESTful APIs for frontend-backend communication.
- Implemented role-based access control supporting Admin, Manager, and Employee workflows.
- Designed database entities and relationships using **TypeORM and MySQL**.
- Developed responsive React interfaces and integrated frontend modules with backend APIs.

- Applied clean coding practices, reusable components, validation, structured error handling, and maintainable application architecture.

- Tech Stack: React, TypeScript, NestJS, TypeORM, MySQL

- **NeuroKeys – AI-Powered Adaptive Typing Intelligence System**

- Developed a real-time application that analyzes typing behavior, accuracy, consistency, and typing rhythm.
- Implemented event-based keystroke tracking and continuous performance analysis.
- Designed an adaptive workflow that dynamically generates personalized practice content based on user performance.
- Built interactive React features including focus mode, keyboard heatmap visualization, and performance analytics.
- Integrated AI-based feedback to generate personalized performance insights and recommendations.
- Tech Stack: React, TypeScript, Tailwind CSS, LocalStorage, AI Integration

- **Real-Time USB Monitoring System**

- Developed a Python-based real-time monitoring system for detecting USB device events and generating alerts.
- Implemented event detection, processing, and logging mechanisms for continuous monitoring of system-level activity.
- Designed the application around event-driven monitoring and real-time response to device activity.
- Tech Stack: Python

Technical Skills

Languages

C++, Python, JavaScript, TypeScript

Frontend

React.js, HTML, CSS, Tailwind CSS

Backend & APIs

NestJS, FastAPI, REST APIs, Backend Architecture, API Integration

Architecture & Distributed Systems

Event-Driven Architecture, Modular Services, Distributed Application Concepts, Asynchronous Processing, Loosely Coupled Components, Scalable Application Design

Messaging & Streaming

Apache Kafka

Database

MySQL, TypeORM, Relational Database Design

Authentication & Infrastructure

Keycloak, Authentication, Authorization, Role-Based Access Control, Docker

Development Practices

Git, GitHub, REST API Development, Clean Code, Debugging, Code Optimization

Tools

Postman, VS Code

Education

B.E. in Computer Science Engineering

Sri Venkateshwara College of Engineering, Bengaluru

CGPA: 8.34

Achievements & Certifications

- Machine Learning Using Python Certification – Simplilearn SkillUp
- Python Programming Certification – GeeksforGeeks
- Data Visualization with Python – IBM Cognitive Classes
- 2nd Place – IoT Workshop Competition

Languages

English (Professional), Kannada (Native), Hindi (Intermediate)
